Office Action Summary	Examiner	Art Unit					
	Daniel Miller	1775 .					
The MAILING DATE of this communication app Period for Reply	ears on the cover sheet with the c	orrespondence address					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).							
Status							
1) Responsive to communication(s) filed on 29 Ju	ne 2006.						
,	action is non-final.						
<i>,</i> —	ince this application is in condition for allowance except for formal matters, prosecution as to the merits is						
closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.							
Disposition of Claims							
4) Claim(s) 1 and 23-33 is/are pending in the application.							
4a) Of the above claim(s) <u>29-33</u> is/are withdrawn from consideration.							
5) Claim(s) is/are allowed.							
6)⊠ Claim(s) <u>1 and 23-28</u> is/are rejected.							
	7) Claim(s) is/are objected to.						
8) Claim(s) are subject to restriction and/or	election requirement.						
Application Papers							
9) The specification is objected to by the Examiner.							
10) ☐ The drawing(s) filed on is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.							
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).							
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).							
11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.							
Priority under 35 U.S.C. § 119							
12)⊠ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).							
a) ⊠ All b) ☐ Some * c) ☐ None of:							
1.⊠ Certified copies of the priority documents	s have been received.	·					
Certified copies of the priority documents have been received in Application No							
3. Copies of the certified copies of the priority documents have been received in this National Stage							
application from the International Bureau (PCT Rule 17.2(a)).

DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1, and 23-28, drawn to an aluminum nitride sintered body.

Group II, claim(s) 29-32, drawn to a method of making an aluminum nitride sintered body.

Group III, claim(s) 33, drawn to a jig for making an aluminum nitride sintered body.

- 2. The inventions listed as Groups II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The aluminum nitride sintered body of group II does not have the same characteristics claimed as group I and could have different special technical features including polish allowance. The invention of group III is an unrelated apparatus wherein the article of group I could be made using a different apparatus not comprising Boron Nitride having the characteristics claimed by applicant and no polish allowance of said aluminum nitride is claimed. Therefore, all the groups lack the same technical feature of polishing allowance found in group II only.
- During a telephone conversation with Arthur Stiener on 11/1/2006 a provisional election was made without traverse to prosecute the invention of group I, claims 1 and 23-28. Affirmation of this election must be made by applicant in replying to this Office action. Claims 29-33 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Application/Control Number: 10/524,270 Page 3

Art Unit: 1775

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 1 and 23-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Natsuhara et al (US 5,732,318).
- 7. Natsuhara teaches a heater with an aluminum nitride substrate with a length of 300 mm and various lengths and a thickness of 0.7 mm (example 1). The AlN substrate further has a metal paste applied to the surface in a pattern and is then covered by a protective film or layer (Ref. Claims 4, 7, 9). Natsuhara teaches a wide range of possible thermal conductance, with a conductance over 50 W/mK being preferred for optimal functionality of the heater, including applicants claimed range (see claim 6, Table 6, and column 9 line 35-50). It further teaches a warpage of not more than 2.0 mm (column 9 line 30-35), which is considered to encompass applicant's claimed range.

Application/Control Number: 10/524,270

Art Unit: 1775

8. However, the reference is silent as to the maximum length being greater than 320 mm or the waviness claimed by applicant.

- 9. It is the examiner's position that because of the similarity in composition conductance and warpage the waviness would inherently be substantially similar.
- 10. Regarding the process limitations of claim 23, "even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process.", (In re Thorpe, 227 USPQ 964,966). Once the Examiner provides a rationale tending to show that the claimed product appears to be the same or similar to that of the prior art, although produced by a different process, the burden shifts to applicant to come forward with evidence establishing an unobvious different between the claimed product and the prior art product (In re Marosi, 710 F.2d 798, 802, 218 USPQ 289, 292 (Fed. Cir. 1983), MPEP 2113)
- 11. It would have been obvious to one of ordinary skill in the art at the time of the invention to use a length of greater than 320 mm because the substrates are cut to size (example 2) of various lengths and could be sized to fit any heater apparatus of different size requirements.
- 12. Further, see In re Rinehart, 531 F.2d 1048, 189 USPQ 143 (CCPA 1976) ("mere scaling up of a prior art process capable of being scaled up, if such were the case, would not establish patentability in a claim to an old process so scaled." 531 F.2d at

Art Unit: 1775

1053, 189 USPQ at 148.) and In Gardner v. TEC Systems, Inc., 725 F.2d 1338, 220 USPQ 777 (Fed. Cir. 1984), cert. denied, 469 U.S. 830, 225 USPQ 232 (1984), wherein it was held that the only difference between the prior art and the claims was a recitation of relative dimensions of the claimed device and a device having the claimed relative dimensions would not perform differently than the prior art device, the claimed device was not patentably distinct from the prior art device.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel Miller whose telephone number is (571)272-1534. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jennifer McNeil can be reached on (571)272-1540. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
